

ACCEL EXTREME 9000 CERAMIC WIRE KITS

ACCEL now offers the cure for burnt spark plug wire boots with Extreme 9000 Ceramic Wire kits. The 8mm Ferro-Spiral core wire now has ceramic boots on the spark plug end of the wires. The ceramic boots will withstand up to 2,000 degrees Fahrenheit. If you are running headers with close tolerances, have an engine bay with little room, or an RV with boots that melt because of heat, these wire kits are the answer for burnt and melting boots.

The ACCEL EXTREME 9000 CERAMIC Wire set have an ultra high temperature double silicone construction wire rated at 600 degrees Fahrenheit peak. The wire uses a 500 Ohms/ft Ferro-Spiral core developed for performance use. It provides excellent energy delivery to the spark plugs, while providing the highest level of RFI/EMI suppression. The Extreme 9000 Ceramic Wires also feature stainless steel spark plug terminals for maximum spark energy to the plugs.

The kits are available in 3 universal configurations with the ceramic boots installed from the factory. More applications coming soon!

Exteme 9000 Ceramic Wire Kits

- 180 degree Straight boots
w/ terminals for male and female tower caps9000C
- 90 degree 5/8" Hex plug boots

CERAMIC SINGLE WIRE REPLACEMENTS

These wire kits make great replacements for that one wire that cut or damaged. Instead of buying a whole new kit the single lead allows you to build your own single replacement wire. The ceramic boot is already installed. All you have to do is cut the wire to desired length, install the boot and terminal, and install on your vehicle. These kits include a 60" 8mm Extreme 9000 Ceramic wire with the ceramic boot pre-installed, 90 boots and terminals for points and HEI caps, along with a straight points style terminal and boot.
